To: Grocery Prices Inquiry

Subject: Public Submission to ACCC Grocery Inquiry by John Wain on 12.2.08

The enquiry should examine (1) why the price of e.g. milk and bread rise for very good reasons because of the drought but never seem to go back to the earlier price when the drought ends;
and (2) why the price of Alaskan Salmon (for one example) was about \$7 per can when the exchange rate was about 50 to the \$US and still remains at about \$7 when the exchange rate is about 90.

Do we ever get prices reduced?
